

Klasyfikacja znaków drogowych

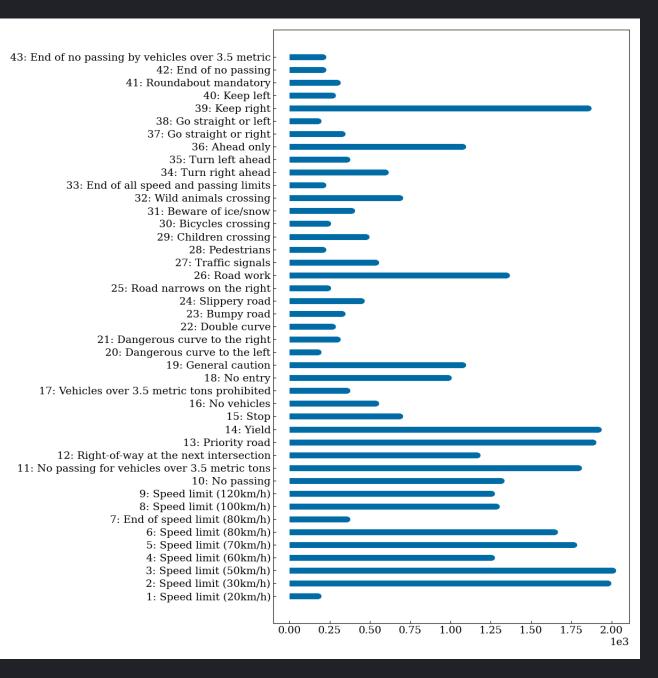

Dawid Karpiński, 24.01.2024 r.

1. Specyfikacja danych

German Traffic Sign Dataset

- 43 unikalnych rodzajów znaków
- 34799 zdjęć do trenowania
- 4410 zdjęć do walidacji
- 12630 zdjęć do testowania
- każde zdjęcie ma 32x32 px

Speed limit (30km/h) Yield Ahead only No passing Keep right Traffic signals Keep right Priority road Speed limit (50km/h)

Dane były niezbalansowane

```
from torch.utils.data import WeightedRandomSampler
samples_weights = 1 / counts

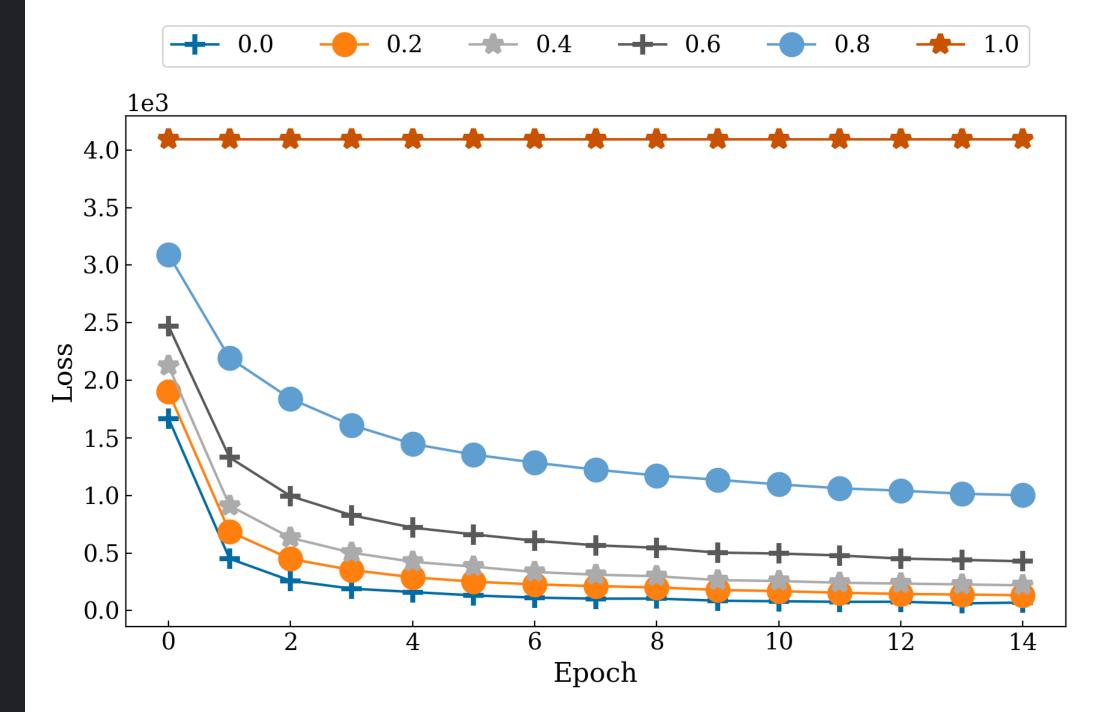

WeightedRandomSampler(
    weights=samples_weights,
    num_samples=len(samples_weights),
)
```

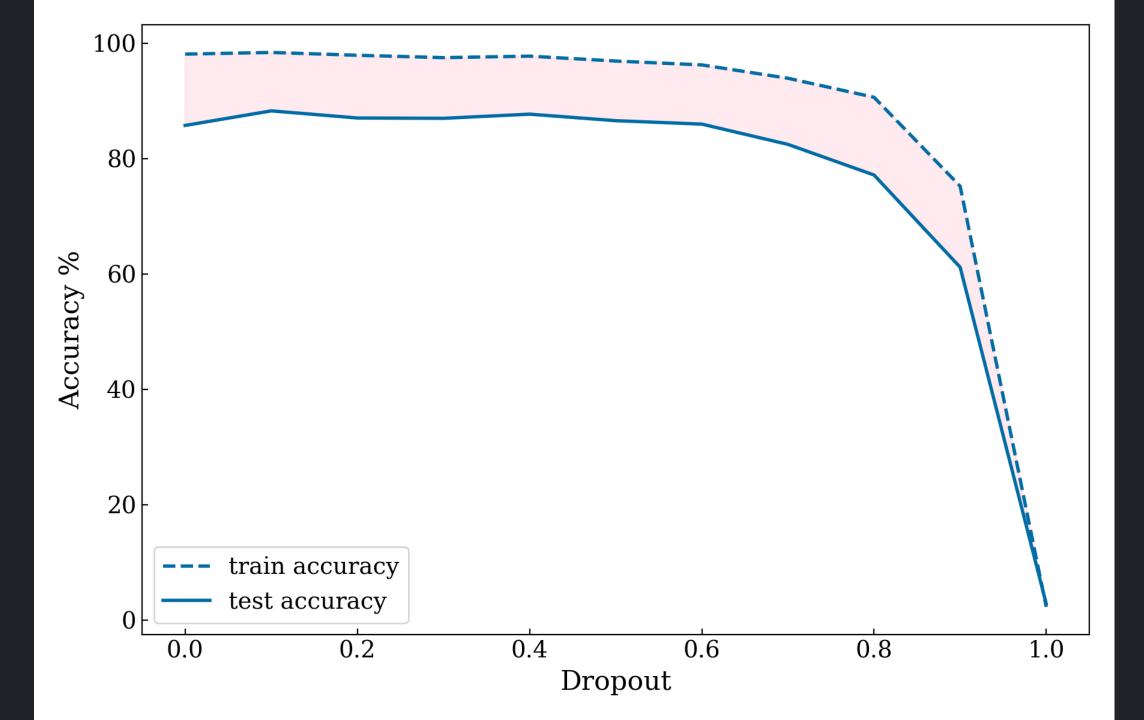

2. Model: CNN

```
# ConvDownBlock:
nn.Conv2d(...) -> nn.BatchNorm2d(...) -> nn.ReLU(...) -> nn.MaxPool2d(...)
# CNN
model = nn.Sequential(
    # (*, 3, 32, 32) -> (*, 8, 16, 16)
    ConvDownBlock(3, 8, 2, 1),
    # (*, 8, 16, 16) -> (*, 16, 8, 8)
    ConvDownBlock(8, 16, 2, 1),
    # (*, 16, 8, 8) -> (*, 32, 4, 4)
    ConvDownBlock(16, 32, 2, 1),
    nn.Flatten(),
    nn.Dropout(dropout),
    nn.Linear(32 * 4 * 4, 128),
    nn.ReLU(),
    nn.Linear(128, len(number_of_classes)),
```

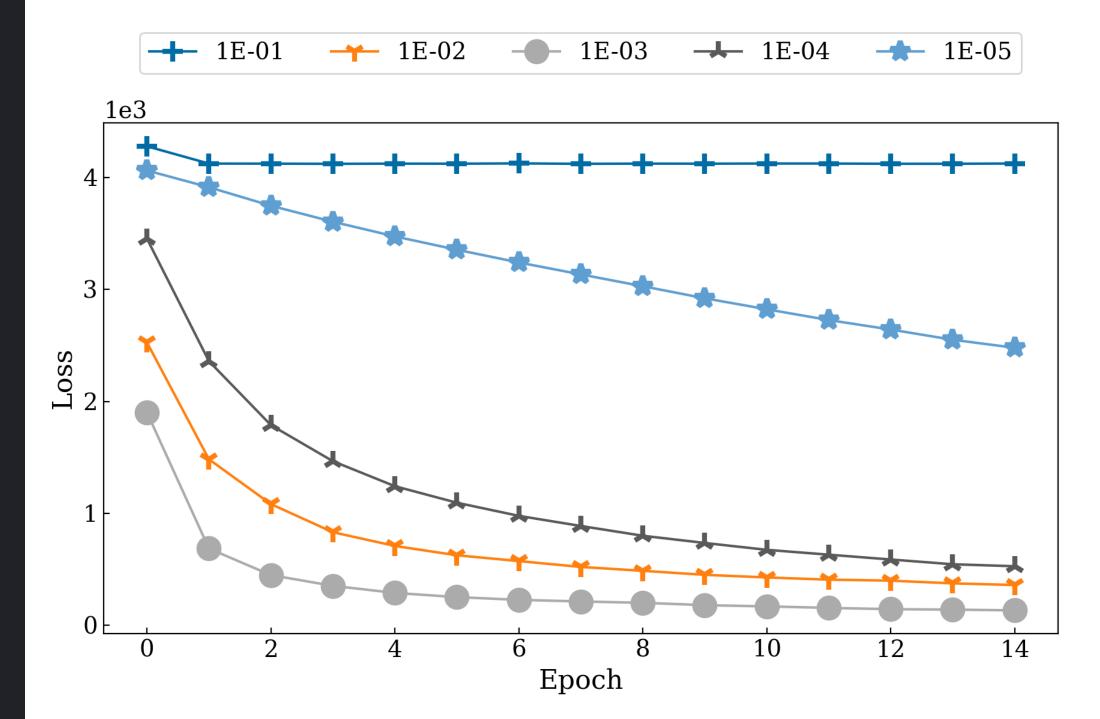

3. Wyniki

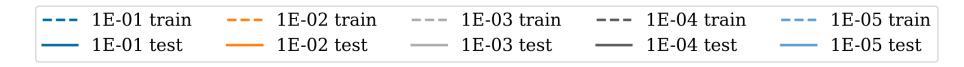

3.1. Wpływ dropout

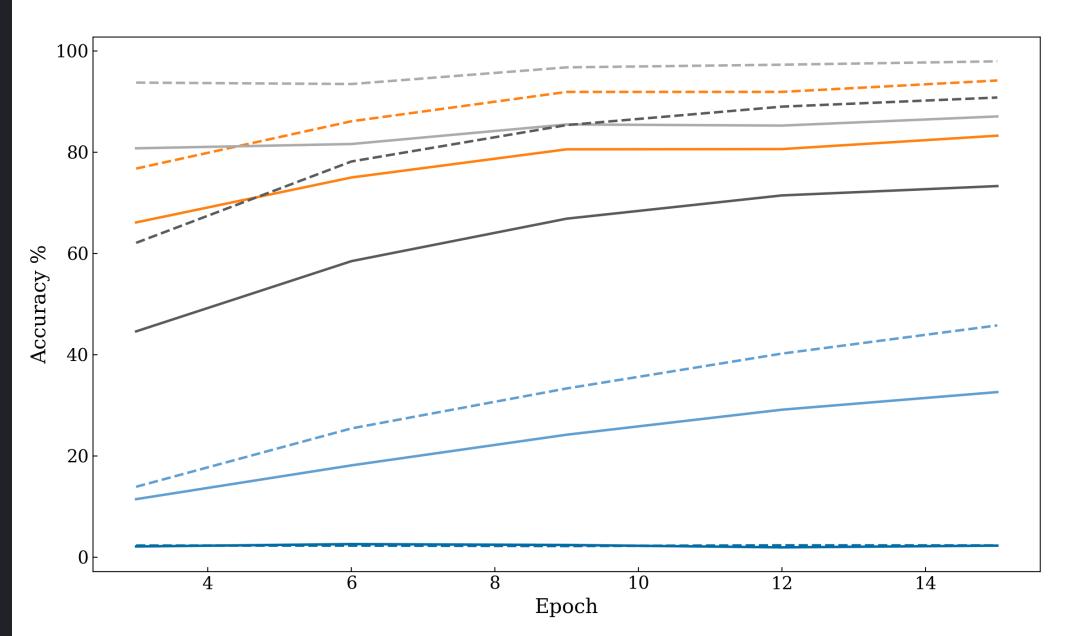

3.2. Wpływ learning rate

Dziękuję za uwagę
